SPANTO

Insecticides-Fungicides for the control of whiteflies, aphids and Powdery Mildew

SPANTO is liquid formulation, which act by contact. SPANTO Controls whitefly (*Bemisia tabaci*) nymphs and pupae, in all crops. It control Aphids in vegetables and ornamentals.

Bactericides - It suppresses the transmission of non-persistent viruses, vectored by aphids, such as ZYMV in squash, melons and watermelons.

SPANTO is a strong fungicidal eliminator and deterrent, especially against powdery mildew. Being a detergent, it can be used as an efficient surfactant (wetting agent), in combination with most insecticides and fungicides.

Contain:

Insecticidal soap – 200 g/l
unique blend of highly effective ingredients.

Rate of application:

0.4-0.5% (400-500ml/hl)

Mode of Action:

SPANTO work on contact and kill susceptible insects by washing away the protective coating on the surface of the insect and by disrupting normal membrane functions inside the insect, causing cell contents to leak and resulting in the rapid death of sprayed insects.
